### **ABSTRACT**

A child of 2.5 years old had an intractable seizure, clinically had megalencephaly and mental retardation. On evaluation, video EEG showed fronto-central seizures and dysfunction R 1, scalp EEG showed bilateral paroxysmal bursts, MRI brain showed prominent vascular spaces in the hemisphere, GE reflux scan showed GERD. Other investigations were within normal limits. The child was treated with antiepileptics and antireflux measures and also rehabilitation.

**Keywords:** Megalencephaly, Mental retardation, Seizures, GERD.
