ABSTRACT

Healthy citizens always stay as support for the overall growth and development of any nation. The overall behaviour of the leader plays an important role to lead the whole mankind together towards a secured, healthy and future-oriented life. If there is the positive behavioural response between the people, between leader and citizens of a nation, between leaders in the glob and between the people on the earth the whole mankind come united and live supportively, collaboratively and happily without any problems. The study noted that the lack of appropriate behaviour preparedness among the world leaders and collaborative efforts to fight against any global health challenges are the reasons to be failures to ensure a secured and healthy life for the mankind on the earth. To this to happen the world leaders should adopt change in their behaviour as positive oriented, cooperative and human and eco-friendly. They should stop fighting each other for dignity, power and to have hold on each other. So that we can expect good global health and more strength to fight against any future challenges that come to mankind.
